

**Are you Aging with a Mobility Disability?
You may be eligible to participate in our study.**

Digital Assistance for Older Adults with Mobility Disability (fully remote study)

The goal of the study is to understand the attitudes, experiences, and preferences toward the use of digital assistance technologies within the home by older adults with mobility disability over time (up to 12 weeks).

The technologies will be provided for free and self-installation will be facilitated by the research team.

Participants must meet the following criteria:

- 60+
- Self-identify as having a mobility disability for at least 10 years
- Use a mobility aid (cane, crutches, wheelchair, walker, or scooter)
OR have serious difficulty walking or climbing stairs.
- No experience using digital home assistants (e.g., Amazon Echo), smart light bulbs or smart plugs
- Own a smart phone or tablet and have personal WiFi network access

Participants will be compensated up to \$120 and will keep the technologies provided upon completion of the study. If interested, contact Emma Lachs at lachs2@illinois.edu or by phone at (217) 265-0150

This study is approved by the University of Illinois at Urbana-Champaign Institutional Review Board (IRB#: 22931) and funded by the National Institute on Disability, Independent Living, and Rehabilitation Research (Grant #90REGE0006) through TechSageRERC.org
